

# Updates on Marine Mammals in Our Waters

## A Presentation on the Diversity and Presence of Long Island Marine Mammals

Please join us as we welcome Dr. Arthur H. “Artie” Kopelman and Dr. Marianne McNamara; two highly acclaimed members of the Coastal Research & Education Society of Long Island (CRESLI). Both representatives of CRESLI will update us on the current state of our ever-evolving and complex ecosystem.

Whales, dolphins, and seals!

Dr. Kopelman, Co-founder and President of CRESLI, has been a population ecologist for nearly four decades. Dr. McNamara is a local-based marine biologist with a focus on teaching science through unconventionally accessible means to the public. She’s spent months at sea all over the world - including Antarctica.

We hope you’re as excited as the CRESLI members are to share their findings about our local whales, dolphins, and seals!

One for the science buffs - this lecture is sure to bring out the marine biologist in all of us!

**Sunday, February 25, 2024**

**Light Refreshments: 12:30 - 1:00 pm**

**Lecture: 1:00 - 2:00 pm**

**Reservations required, please call LIMM to reserve your seat!**
